ww3-gpu Parity Workflow

CPU rule

- Bit for bit with the Fortran of the same executable: test.comp finding a file different fails the entry
- Only files that two Fortran runs already write differently (ww3_self) are excused
- nccmp-tol FAIL also fails; its PASS never excuses a byte difference

GPU rule (ADR-0014)

- CUDA verdict is nccmp-tol with tolerances.txt, against the Fortran and --ww3
- Its timing record says: GPU: judged by tolerance, not bits
- Runs only under the owner; none has been recorded yet

Timing

- Only bench/results/ record is the 2026-09-15 kernel study, kept under the older l1 rule
- No end-to-end ww3-gpu speed figure has passed this workflow yet
